

RETURN Challenge

When the team scans the Arrival QR code, the MS instructs the Team to measure the prop angles and derive the guidance computer parameters. The Team enters the parameters into the LCD display. The station tells the MS whether the correct codes were entered. If the codes were incorrect, the MS tells the station to accept more codes (for up to 3 attempts). The Team scans the Return QR code to find out whether they were successful. The MS tells the Team they are done or should try again.
